DETAILED ACTION

1. A telephone call was made to Tadashi D. Horie on October 29, 2004 to request an examiner's amendment to place the instant application in condition for allowance, but did not result in an authorization being made.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. Figures 12-17 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

4. Claims 4 and 6 objected to because of the following informalities: there is insufficient antecedent basis for the limitation in these claims. These claims depend on claim 1 and 3, which refer to "data segments". It is unclear which of the data segments claim 4 and 6 are referring to. Appropriate correction is required. The suggestion of

changing "said data segment" to "at least one of said data segments" or "each data segment" is noted.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The limitation "wherein said receiving unit receives a plurality of training data segments before receiving a data segment to which deference is to be applied" is not clear. It is not understood how the word "deference" is being applied to this claim.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

6. Claim 8 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. This claim involves nothing more than a manipulation of a program. This program is not capable of producing a useful result without being fixed within a tangible storage medium to enable its functionality.

Allowable Subject Matter

7. Claims 1, 3-7 and 9 allowed. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 7 and 9, the prior art fails to teach the limitation "delay means for obtaining an amount of holding time corresponding to each data segment by subtracting the relative delay time of each data segment by subtracting the relative delay time of each data segment from a maximum delay time to be reduced, and outputting each data segment after delaying each data segment for the amount of holding time corresponding to each data segment".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

a) Burnsweig, Joseph (U.S. Pat. No. 3,843,930) Time Delay Controller
Circuit for Reducing Time Jitter Between Signal Groups

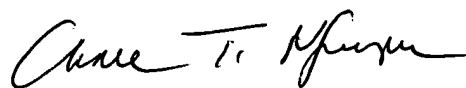

b) Zhu, Qin-Fan et al. (U.S. Pat. No. 5,534,937) Minimum-Delay Jitter
Smoothing Device And Method For Packet Video Communications
